

DCD Pull Sheet

All Lifeline of Ohio organ recovery cases require a scrub person and a circulating RN. Anesthesia may be needed dependent on what organs are being recovered. The Organ Recovery Coordinator and Surgical Recovery Specialist will be available to help assist the staff in facilitating the smoothest procedure possible for all concerned.

Incoming transplant recovery teams may bring/request additional instruments for their portion of the procedure. Requests will be relayed as early as possible. Each team will provide the appropriate preservation solutions, tubing, cannulas, and packing materials needed for each organ. Incoming transplant teams will need assistance back to the ED post recovery.
